3-phase PWN-APR				

AC power regulators, APR-N series

Description

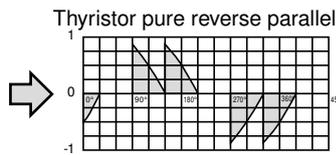

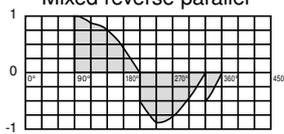

The APR-N series provides high functionality with improved functions and performance as a successor to the APR-MX2 series.

Features

Thyristor pure reverse parallel (6-arm) is standardized (3-phase).

- Almost no even harmonic current is generated, and so countermeasures for harmonic current are easy compared with systems with mixed reverse parallel.
- Magnetic flux deviation in transformer primary control is unlikely to occur, and so the transformer can be more compact and highly efficient.
- Control characteristics are improved for unbalanced loads.

Load current waveform example
(phase angle $\alpha = 90^\circ$)
Mixed reverse parallel

Imbalance compensation (3-phase)

Imbalance compensation can be performed by making settings using the setting and display module if there is a load imbalance or power supply imbalance.

3-phase, 4-wire circuits supported (3-phase models with control method T or A)

Linearity of $\pm 3\%$ FS is achieved for 3-phase, 4-wire circuits. (Optional specifications: Specify ZB4.) Also, connection of an external diode to the neutral phase is not required.

Note: The control phase angle is different from the standard 3-phase models.

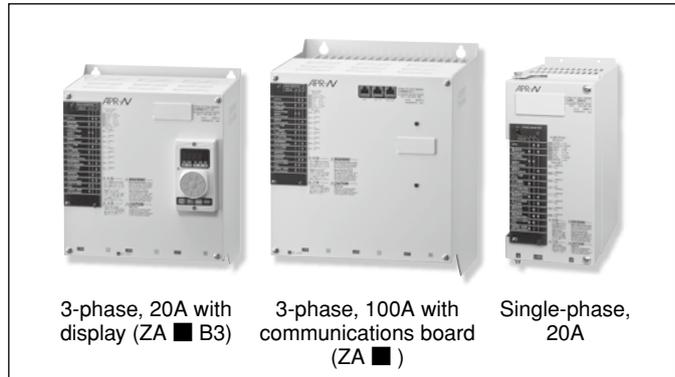

Do not use this for 3-phase, 3-wire circuits.

Switch between phase control and cycle control.

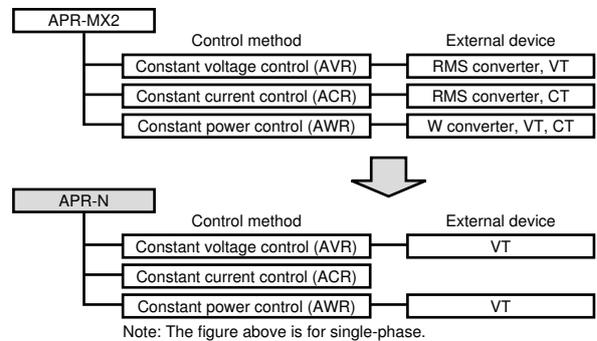

- Flicker prevention cycle control (staggering the power application cycle of 50 units max.) enables distributed load operation. (Optional specifications: ZAP or ZAX is required.)
- Perform cycle control for loads with a large change in resistance value (e.g., pure metal) using inrush current automatic suppression control (composite control) independent of soft start time. (models with control method A only).
- Switch between phase control and cycle control during operation. (using a display device or network communications).

Built-in high-precision feedback control (except models with control method T)

Control accuracy of $\pm 1\%$ FS for constant current control, constant voltage control, and constant power control. Built-in high accuracy control circuits improve temperature control accuracy, save space, reduce wiring, and help decrease total costs.

3-phase, 20A with display (ZA ■ B3) 3-phase, 100A with communications board (ZA ■) Single-phase, 20A

Note: The figure above is for single-phase.

Independent settings for soft start time and soft in-crease/decrease time

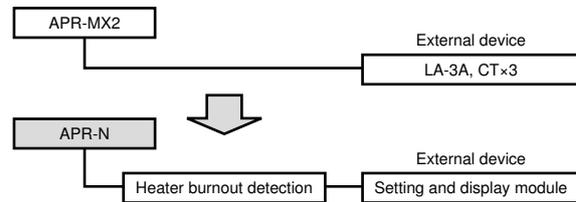

Built-in advanced heater burnout detection (except models with control method T. This functionality requires a communications board and a setting and display module.)

Advanced heater burnout detection (equivalent to LA-3A) enables detecting burnouts in 1 of 10 elements for single-phase operation.

Burnouts can be detected in 1 of 9 elements for 3-phase, 3-wire connections (line current detection).

Burnouts can be detected in 1 of 15 elements for 3-phase, 4-wire connections (line current detection).

Use in applications for heaters of the same material and same capacity (e.g., alloy, pure metal, or silicon carbide).

Note: The figure above is for 3-phase. An external CT is required for single phase.

Enhanced error detection

A total of 12 errors, including major failures and minor failures, are displayed using alarm LEDs.

- Thyristor error (except models with control method T)
- Current limit detection (except models with control method T)
- External setting input not connected (burnout)
- Cooling fan service life warning by monitoring the fan speed (models with fan only)

These and more have been added.

MSA CONTROL - (11) 3961-1171 - comercial@msacontrol.com.br

• **Enhanced optional accessories**

- The setting and display module enables a variety of monitoring, high-accuracy digital settings, and function settings.
- Adding a communications board enables a wide range of communications specifications.
- Easily perform operation or monitoring and change settings by linking to a PLC or touch panel.
- Finger guard (IP20)

These and more have been added.

Refer to pages 10/5 and 10/6 for details.

• **Full lineup of products compliant with international standards**

Note: Inquire about the status of compliance.

• **Compliance with RoHS Directive**

The APR-N provides compliance with the European Union's RoHS Directive on the restriction of use of hazardous substances as a standard feature.

The APR-N is ideal for environments in which the use of these six hazardous substances is restricted.

Six hazardous substances: Lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB), and polybrominated diphenyl ether (PBDE)

RPNW4A20-T, RPNW4A20-A	1200	789.8-914.5			CS5F-1200

Note: *1 The value for the rated load capacity is calculated using the following equation.

Rated load capacity (single-phase) = Rated input voltage x Output current

Rated load capacity (3-phase) = $\sqrt{3}$ x Rated input voltage x Output current

*2 To replace only the built-in rapid fuse, use the type number that is listed. For models with a microswitch (CR2L, CR2IS, CR6L), replace G with S.

If the unit is certified for UL standards, the built-in rapid fuse is also certified for UL standards.

■ Specification

Item		Specification								
Main circuit power supply	Single-phase	100 to 240V, 380 to 440V, 380 to 480V AC±10%, 50/60Hz ±2.5Hz (automatic frequency detection and switching)								
	3-phase	200 to 240V, 380 to 440V, 380 to 480V AC±10%, 50/60Hz±2.5Hz (automatic frequency detection and switching)								
Rated current (A)	Single-phase (ambient temperature of 50°C)	20	45	60	100	150	250	350	450	600
	3-phase (ambient temperature of 40°C)							-		
Cooling method		Self-cooled				Fan-cooled				
Control circuit power supply	Power supply voltage	Single-phase: 100 to 240V AC ±10% (*1.) 3-phase: 200 to 240V AC±10%								
	Power supply capacity (VA) single-phase	34			40		45			
	Power supply capacity (VA) 3-phase	39			58		72	-	78	128
Internal heat generation (W)	Single-phase	47	74	89	133	203	294	377	510	700
	3-phase	90	170	210	330	560	840	-	1490	2070
Applicable load	Phase control	Resistive load, inductive load, transformer primary side, rectifier primary side								
	Cyclic control	Resistive load, inductive load, transformer primary side (Applicable only for single-phase models with control method P.)								
Control	Waveform control	Thyristor pure reverse parallel connection (single-phase and 3-phase) Phase control or cyclic control (single-phase: intermittent, 3-phase: continuous) (switched with DIP switch)								
	Output voltage adjustment range	0% to 100% (effective value) of main circuit power supply voltage (except thyristor voltage drop)								
	I/O characteristics	Effective value linear characteristics and linearity ±3% FS max. (for a resistive load and for a setting signal of 10 to 90%.)								
	Power supply voltage compensation	Compensation for output fluctuation to ±3% FS max. relative to ±10% fluctuation in power supply voltage (for a setting signal of 10% to 90%, applies to models with control method T or A.)								
	Power supply voltage compensation setting	Fine tuning of max. output voltage, built-in PVC knob (applies to models with control method T or A).								
Setting	Soft start time and soft up/down time setting	Built-in ST knob. 0.5 to 10s or 5 to 100s. Soft up/down time can be set to 0.5s (switched with DIP switch).								
	CLR (current limit) setting	Built-in CLR knob. 0% to 102% of rated current (not for models with control method T)								
	P adjustment	Built-in P knob. 0.1 to 0.5 times proportionate gain (not for models with control method T)								
	I adjustment	Built-in I knob. Integral time of 25ms to 125ms (not for models with control method T)								
	Gradient setting	0% to 100% of output voltage 1. External variable resistor: 1kΩ (B characteristics: 1/2W min.), 2. 1 to 5V DC signal (1 and 2 switched with DIP switch), 3. Built-in GRD knob (optional)								
	Base load setting	0% to 100% of output voltage. Built-in BL knob (optional). Reverse gradient characteristics are enabled using combination with gradient settings.								
	Manual setting	External variable resistor: 1kΩ (B characteristics 1/2W min.)								
	Automatic setting	Current signal: 4 to 20mA DC (Zin = 100Ω) Voltage signal: 0 to 5V DC, 1 to 5V DC (Zin = 10kΩ) (switched with DIP switch)								
Function	Run/stop switching signal (RUN)	No-voltage contact input (contact voltage: 12V DC, 10mA)								
	Auto/manual switching signal (RUN)	No-voltage contact input (contact voltage: 12V DC, 10mA)								
	Alarm reset signal (RST)	No-voltage contact (momentary) input (contact voltage: 12V DC, 10mA)								
	Automatic inrush current suppression	Current is suppressed by switching the phase angle so that the current is 90% max. of the current limit setting value when cyclic control is used. (Applies only to models with control method A.) Applicable load: Alloy, nichrome, pure metal, or silicon carbide.								
	Feedback enable/disable switching	DIP switch ON side: Purchased control method OFF side: Models with control method A (*2)								
	Parallel operation master/slave selection	DIP switch ON side: Master OFF side: Slave Max. number of connected slaves: 50 Communications board (RPN003-AP or RPN003-AX) and connection cable required (optional).(*3)								
	Network communications	Communications standard: RS-485 compliant 2-wire half-duplex asynchronous Protocol: Modbus RTU compliant, Max. number of connectable units: 31 Communications board (RPN003-AM), setting and display module (APD1), and connection cable for remote operation (RPN002-□) required (optional).								

MSA CONTROL - (11) 3961-1171 - comercial@msacontrol.com.br

■ Specification

Item	Specification	
Display	1. Drive monitor display (green LED lit at output), 2. Alarms and errors displayed with red, yellow, and green LEDs, 3. Digital display using APD1 (optional).	
Alarm contact output	Relay contacts, major failure (SPST-NO contacts, 250V AC, 1A), minor failure (SPST-NO contacts, 250V AC, 1A)	
Error detection and protection	Overcurrent	Current at approx. 120% min. of rated current detected by built-in CT (except models with control method T)
	Thyristor error	Thyristor short-circuit failure detected at output stop or output at 0% (except models with control method T)
	Rapid fuse blowout	Detected at contact welding of built-in rapid fuse. Main element protection.
	Overheat error	Detected with temperature sensor (Single-phase: fan-cooled models only, 3-phase: all models)
	CPU memory error	Memory error detected at startup
	Communications error (optional)	Detected when communications cannot be performed correctly using the communications board (optional).
	Heater burnout	"Burnout detection determined by comparing the built-in HT knob (heater burnout judgment setting level 3 to 100%) and below the current value. (Standard function. Single-phase only.) (*4)"
	External setting input not connected	"Detected when 1. The current for the voltage setting signal is not connected or disconnected (4mA max. or 1V max. or 2. When the manual or gradient setting is not connected. (*5.)"
	Power supply error	Detected when the power supply frequency is not 45 to 65 Hz.
	Current limit detection	Detected when a load current that is the same as the current limit set value is detected.
	Undervoltage	Detected when the control power supply voltage drops below 80% of the rated voltage.
	Overvoltage	Detected when the control power supply voltage exceeds 115% of the rated voltage.
Cooling fan service life (fan-cooled models only)	Detected when the rated number of rotations drops below 70% to 200rpm by monitoring the number of revolutions of the cooling fan.	
Feedback control (phase control only)	AC CLR (models with control method A) AC ACR + AC CLR (models with control method B) AC AVR + AC CLR (control method type C) AC AWR + AC CLR (models with control method D) DC AVR + AC CLR (models with control method E) DC ACR + AC CLR (models with control method F) Control accuracy: ±2% FS for AC ACR, otherwise, ±1% FS AC CLR functionality has priority for models with control method B, C, D, E or F. Accuracy conditions: Power supply voltage fluctuation of ±10% with a constant load, or 1 to 4 times the load fluctuation at a constant power supply voltage.	
Environment	Ambient temperature	-5 to 50°C (decrease relative to rated current if ambient temperature is between 50 and 55°C) -5 to 40°C (decrease relative to rated current if ambient temperature is between 40 and 55°C)
	Storage temperature	-20 to 60°C
	Ambient humidity	30% to 90% RH (no condensation)
	Others	Free from corrosive gas, dust, or vibration. Indoor use. Altitude up to 1000 m.
Insulation	Withstand voltage (main circuit to ground)	2000V AC, 1 minute (200 to 240V models), 2500V AC, 1 minute (380 to 440V models)
	Insulation resistance (to ground)	10MΩ min. (500V DC megger)

Note: ¹ Be sure to perform operation with a rated voltage of either 110V (100V system) or 220V (200V system). Adjust the maximum output voltage using the PVC setting if the rated voltage is 115 to 120V (100V system) or 230 to 240V (200V system). (models with control method T or A only)
² Use for test operation (i.e., operation test with temporary load) with models with control method B, C, D, E, or F. The control method will not change even if a model with control method T or A is used on the OFF side.
³ The RPN003-AX is compatible with the MX series and MX2 series.
⁴ Heater burnout detection operates for single-phase phase control except for models with control method T. For cyclic control, load open detection is used.
A setting and display module is required for advanced heater burnout detection (single-phase and 3-phase).
⁵ The "external setting input not connected alarm" does not operate if the voltage signal is set to 0 to 5V DC.
⁶ Inquire about models with a rated current of 800A, 1000A, or 1200A.

■ Type number nomenclature

Note: ¹ In the type number, the white boxes are required items and the black boxes are optional items. For items with no specification, fill in the box with a hyphen or slash.

APR-N series

No. of phases

- E: Single-phase thyristor pure reverse parallel
- W: 3-phase thyristor pure reverse parallel

Input voltage

- 2: 100 to 240V (single-phase)
200 to 240V (3-phase)
- 4 (*2): 380 to 440V, 380 to 480V
- 9: Special voltage

A transformer is enclosed if the input voltage is not 100 to 240V.

Inquire about special voltage.

Note: ² Specify UL or CE as the international safety standard for 380 to 480V.

Rated current

- 020: 20A
- 045: 45A
- 060: 60A
- 100: 100A
- 150: 150A
- 250: 250A
- 350: 350A (single-phase only)
- 450: 450A
- 600: 600A
- 800: 800A
- A00: 1000A
- A20: 1200A

Inquire about 800A, 1000A, and 1200A.

Control method

International safety standards

- Blank: No specification
 - UL: Compliant with UL, cUL, and CE marking
 - CE: Compliant with CE marking
- Inquire about the status of compliance.

Others

- Blank: No specification
- 01: No operation transformer
- 02: Test report (Japanese and English) enclosed
- 03: No operation transformer, test report (Japanese and English) enclosed

The test report is in the Fuji Electric standard format.

The report can be made with special specifications if specified by the customer. This is not displayed in the unit type number.

Specification

- Blank: Standard
- Z (*3): Unit optional accessories

Setting device

- Blank: No
- 1: Setting device, 1 set
- 2: Setting devices, 2 sets
- 3: Setting devices, 3 sets
- 4: Setting devices, 4 sets

Setting device type: RPN001 (variable resistor, nameplate, knob, and adhesive sheet)
This is not displayed in the unit type number.

MSA CONTROL - (11) 3961-1171 - comercial@msacontrol.com.br

Control method

Code	Control method	Required external devices (sold separately)	Control method overview
T	No feedback function	–	No built-in CT. (Functions such as overcurrent protection and heater burnout detection are not included.) This method applies to loads with small changes in resistance, such as alloy heaters.
A	Current CLR	–	CLR = Current limit: Output voltage is limited so that the output current does not exceed the CLR setting. This method is used for applications (such as pure metal heaters) for which the maximum current that flows to the load must be limited.
B	AC ACR + AC CLR	–	ACR = Constant current control: Control is performed so that the output current is proportional to the set value. This method is used for applications for which the current must be constant, such as pure metal heaters or direct power application heating.
C	AC AVR + AC CLR	VT (type number: PT-5S) single-phase: 1 VT (type number: PT-5S) 3-phase: 2	AVR = Constant voltage control: Control is performed so that the output voltage is proportional to the set value. This method is used for applications that require output voltage accuracy.
D	AC AWR + AC CLR	VT (type number: PT-5S) single-phase: 1 VT (type number: PT-5S) 3-phase: 2	AWR = Constant power control: Control is performed so that the output power is proportional to the set value. This method is used for applications that require heat level control, such as silicon carbide heaters or sensorless operation.
E	DC (or AC) AVR + AC CLR (feedback input: 0 to 10V DC)	Isolating converter (high-speed response) or VT (type number: PT-5S) + RMS converter (type number: RMS-2)	AVR = Constant voltage control: The functionality is the same as for current given above. This method is used for applications that require accuracy, such as the transformer secondary side or rectifier secondary side. Control is performed so that the feedback value is 10V when the set value is 100%.
F	DC (or AC) ACR + AC CLR (feedback input: 0 to 10V DC)	Isolating converter (high-speed response) or CT (type number: CT-5S) + RMS converter (type number: RMS-2)	ACR = Constant current control: The functionality is the same as for current given above. This method is used for applications that require accuracy, such as the transformer secondary side or rectifier secondary side. Control is performed so that the feedback value is 10V when the set value is 100%.
P	Transformer primary control using cyclic control	Enclosed CT (type number: CT-5S)	Single-phase only. This method can be applied to isolating transformers and resistive loads (resistance value changes of 20% max.). Output will stop due to load error if the load drops below 30% of the APR rated capacity.

Specify a model with control method E if connection is made to an already installed W converter (W-2).

Note: ³ Unit optional accessories

Main optional specification name	Description	Option specification number (*4.)
Soft start time 0.05s min.	Soft start time variable range: 0.05 to 10s/0.05 to 100s	RPN□□□□□-□■-Z06
Built-in base load setting	Base load setting included on control printed circuit board	RPN□□□□□-□■-Z07
Built-in gradient setting	Gradient setting included on control printed circuit board	RPN□□□□□-□■-Z43
Control power supply separation	Control power supply terminal block (L11-L21-L31) internal wiring deletion	RPNW□□□□-□■-Z72
Communications board: Parallel operation supported (*5)	Flicker prevention and communications board for parallel operation	RPN□□□□□-□■-ZAP
Communications board: MX compatible parallel operation supported (*6)	MX and MX2-series compatible parallel operation communications board	RPN□□□□□-□■-ZAX
Communications board: Modbus RTU supported	Communications board for Modbus RTU	RPN□□□□□-□■-ZAM
APD1 + APD1 mounting bracket	APD1 and a connection cable are attached to the front of the unit.	RPN□□□□□-□■-ZB3
3-phase, 4-wire supported	Control board changed to 3-phase, 4-wire (models with control method T or A only)	RPNW□□□□-□■-ZB4
Function code change (*7)	Shipment made with the specified function code	RPN□□□□□-□■-ZC■
Input voltage: Special voltage supported (*8)	TR1-70R/E1 operation transformer enclosed	RPNE9□□□-□■-ZE1

Note: ⁴ To specify multiple unit option specifications, list the specification numbers after Z.
For example, the following is the order type number for a unit with the following options: Soft start time 0.05s min., communications board, parallel operation, and 3-phase, 4-wire.
Order type number: RPNW □□□□ - □■ -Z06APB4
⁵ Not compatible with the MX series and MX2 series. Also, cyclic control cannot be performed using both single-phase and 3-phase.
When parallel operation is used, heater burnout detection cannot be used with the setting and display module for the slave device.

⁶ Compatible with the MX series and MX2 series. Also, cyclic control cannot be performed using both single-phase and 3-phase.
When parallel operation is used, heater burnout detection cannot be used with the setting and display module for the slave device.
⁷ Before shipment, settings are changed in-house using the setting and display module. A setting and display module is not enclosed at shipment. Each unit can be handled individually. Inquire for details.
⁸ The primary side tap voltage for the TR1-70R/E1 operation transformer is 250, 254, 260, 265, 277, or 305V AC.

■ Other optional accessories (sold separately)

• Mounting bracket for external cooling installation

Single-phase (RPN004-E □□)

Type	Description
RPN004-E02	For RPNE□020-□
RPN004-E06	For RPNE□045-□ and RPNE□060-□
RPN004-E10	For RPNE□100-□
RPN004-E15	For RPNE□150-□
RPN004-E25	For RPNE□250-□
RPN004-E35	For RPNE□350-□
RPN004-E45	For RPNE□450-□
RPN004-E60	For RPNE□600-□

3-phase (RPN004-W □□)

Type	Description
RPN004-W02	For RPNW□020-□
RPN004-W06	For RPNW□045-□ and RPNW□060-□
RPN004-W10	For RPNW□100-□
RPN004-W15	For RPNW□150-□
RPN004-W25	For RPNW□250-□
RPN004-W45	For RPNW□450-□
RPN004-W60	For RPNW□600-□

• Main circuit terminal cover

3-phase (RPN006-W □□)

Type	Description
RPN006-W02	For RPNW□020-□
RPN006-W06	For RPNW□045-□ and RPNW□060-□
RPN006-W10	For RPNW□100-□
RPN006-W15	For RPNW□150-□
RPN006-W25	For RPNW□250-□
RPN006-W45	For RPNW□450-□
RPN006-W60	For RPNW□600-□

Note: The single-phase models are provided in standard models, and so there is no main circuit terminal cover available as an option.

• Finger guard

Single-phase (RPN005-E □□)

Type	Description
RPN005-E02	For RPNE□020-□
RPN005-E06	For RPNE□045-□ and RPNE□060-□
RPN005-E10	For RPNE□100-□
RPN005-E15	For RPNE□150-□
RPN005-E25	For RPNE□250-□
RPN005-E35	For RPNE□350-□
RPN005-E45	For RPNE□450-□
RPN005-E60	For RPNE□600-□

3-phase (RPN005-W □□)

Type	Description
RPN005-W02	For RPNW□020-□
RPN005-W06	For RPNW□045-□ and RPNW□060-□
RPN005-W10	For RPNW□100-□
RPN005-W15	For RPNW□150-□
RPN005-W25	For RPNW□250-□
RPN005-W45	For RPNW□450-□
RPN005-W60	For RPNW□600-□

• Feedback control CT and VT

Item	Type	Rated primary input	Rated secondary output
CT	CT-5S	20A, 45A, 60A	0.1A 5VA and Class 1
		100A, 150A, 250A 350A, 450A, 600A	
VT	PT-5S	100V, 110V	10V 5VA and Class 1
		200V, 220V	
		380V	
		400V, 440V	
		420V, 460V	
		440V, 480V	

Note: Number of primary pass-through turns for CT-5S: 5 turns for 20A, 3 turns for 45A, 2 turns for 60A, and 1 turn otherwise.
The primary voltage for PT-5S is a 2-tap input except for 380V.

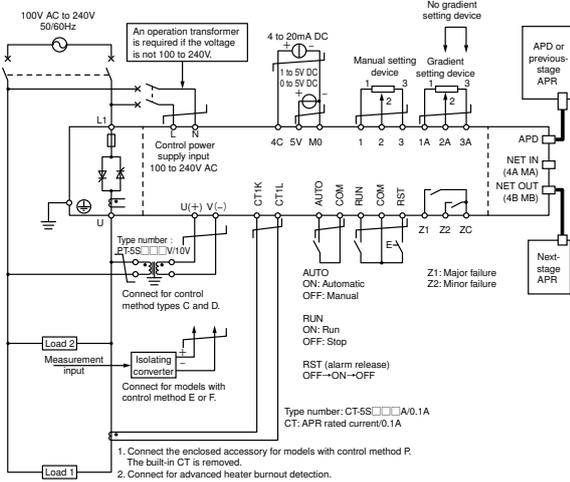

• Setting and display module, communications board, and connection cable for remote operation

Item	Type	Name	Specification
Setting and display module	APD1	–	–
Cable	RPN002-1	Connection cable for remote operation	Length: 1m
	RPN002-3	Connection cable for remote operation	Length: 3m
	RPN002-5	Connection cable for remote operation	Length: 5m
Communications board	RPN003-AP	Flicker prevention and communications board for parallel operation	–
	RPN003-AX	MX and MX2-series compatible parallel operation communications board	–
	RPN003-AM	Communications board for Modbus RTU	–

Note: Only one communications board of any type can be mounted.
Specify ZA □ in the unit option specifications to have the board mounted and shipped.

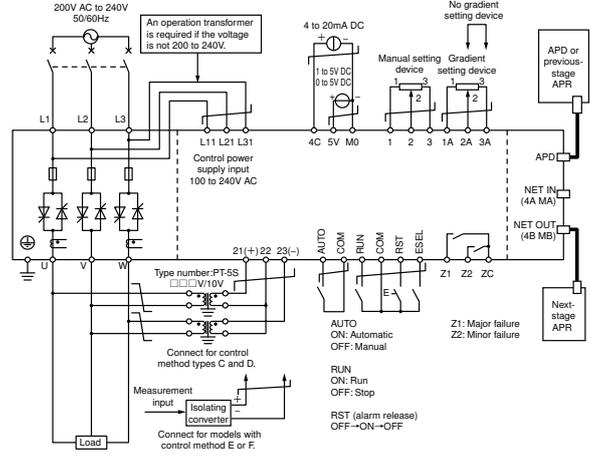

External connections

External connections (single-phase)

External connection (full connection with no function allocation changes)

External connection (3-phase)

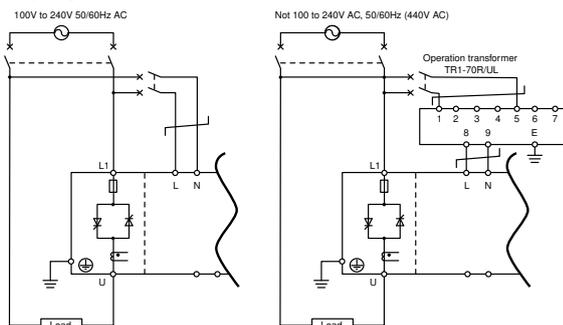

External connection (full connection with no function allocation changes)

Control terminal functions using setting and display module (SW8: ON)

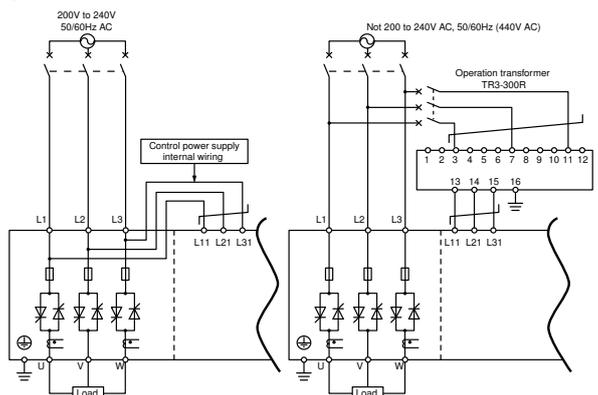

You can make function code settings using a setting and display module and delete external wiring or change functions using network communication.

Control terminals	Wiring	Remarks
RUN	Required	Operation is not performed when the RUN terminal is OFF. When the RUN terminal is ON, the unit will run or stop when the RUN/STOP key is pressed on the setting and display module. Operation using the RUN/STOP key on the setting and display module is recorded in non-volatile memory. If the last operation is RUN, the unit will run or stop according to the RUN terminal ON/OFF status. If the last operation is STOP, the unit will not run even if the RUN terminal is ON. The unit will run or stop only when the RUN terminal is turned ON or OFF if function code 1.b16 is set to OFF. The unit can be started or stopped using network communications if the RUN terminal is ON.
1, 2, 3 1A, 2A, 3A	Selectable	Settings can be made using a setting and display module for network communications, and so wiring is not required. The functions of the setting device (e.g., CLR and ST) for adjusting the APR unit can be allocated to an external setting device.
AUTO RST	Selectable	Operation can be performed using a setting and display module for network communications, and so wiring is not required. Alarms can also be reset using the RESET key on the setting and display module. Can be allocated HIGH setting/LOW setting switching input for two-position control.
4C, 5V, M0	Selectable	Control can be performed using network communications if control is made using PLC output.
Z1, Z2, ZC	Selectable	Alarm codes are displayed on the setting and display module. Network communications can be used to read alarm codes and check if there are major failures or minor failures.

	External CT input	CT1K, CT1L		CT connection using advanced heater burnout alarm
Parallel operation/ Modbus RTU	APD I/O	APD		Sending and receiving set values with connection of a setting and display module (APD)
				Receiving parallel operation signals from previous-stage APR in parallel operation
	Parallel operation I/O	NET IN NET OUT		Sending and receiving set values from the host in network communications
				Sending parallel operation signals to next-stage APR in parallel operation
	4A, MA 4B, MB			MX and MX2-series compatible input terminal
				MX and MX2-series compatible output terminal

Note: The function description for the control circuit applies when there are no changes in function allocations.
Note:*1 Do not use 460V or 480V if the voltage specifications of the unit are standard.

APD1 setting and display module

■ Features

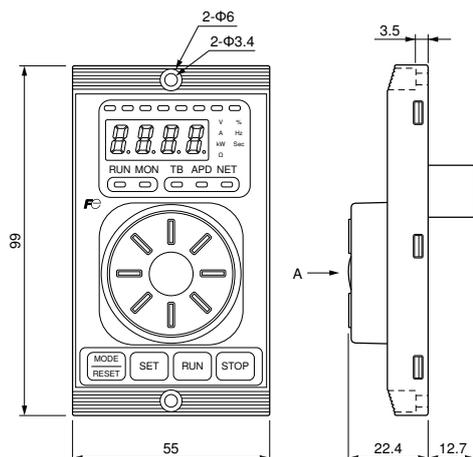

The APR-N series enables a wide variety of operations and settings.

- Fast selection and display switching using dial operation.
- Display two elements at the same time with the data display and multi-indicator.
- Perform unit diagnosis even with no data for the input signal check function.
- Error detection history display functionality.
- High-accuracy setting using digital display.
- Customize functionality by changing function codes.
(For example, allocate alarm outputs or allocate the terminal block for internal adjustment functionality.)
- Function code copy functionality.
- Compliance with EU RoHS Directive.
- Compliance with UL and cUL standards.
- Compliance with CE marking standards.

■ Specifications

Item	Specification
Type	APD1
Degree of protection	Panel surface: IP40, Back: (mounting surface): IP20
Operating location	Indoor
Ambient temperature	-5 to 50°C
Ambient humidity	30% to 90% RH (no condensation)
Environment	Location free from dust, corrosive gas (especially sulfidizing gas and ammonia gas), flammable gas, oil mist, water droplets, and direct sunlight. Location free from salt damage. Free from condensation due to sudden temperature changes.
Altitude	1000m max.
Ambient storage temperature	-20 to 60°C
Ambient storage humidity	30% to 90% RH (no condensation)
Installation method	Vertical installation (wall mounting)
Unit mounting tightening torque	
Mounting screws	M3 x 16
Tightening torque (±10%)	0.7N·m (7kgf·cm)
Mass	55g

■ Dimensions, mm

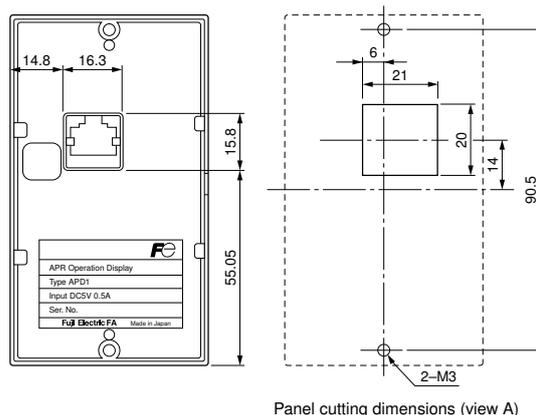

■ Hardware specifications

Item	Specification
Connection cable for remote operation	Satisfies standards of U.S. ANSI, TIA, and EIA-568A Category 5. Straight cable (straight cable for 10Base-T and 100Base-TX)
Max. communications distance	20m (non-insulated)
External connection terminal	RJ-45 connector (modular jack connector)

Note: ¹ If a setting and display module is used, a connection cable for remote operation (RPN002-□) and a communications board (RPN003-A□) are required.

² If a commercially available cable is used, do not use an STP (shielded) cable.

■ Part names and functions of setting and display module

Multi-indicator

Display values are shown in eight segments on the LED monitor.
The indicators also display internal I/O monitors and communications monitors.

LED monitor

The monitor is a 7-segment LED display. The following items are displayed according to the operation.

- **Monitor mode**
Operation data (e.g., output voltage, output current, and load resistance values) is displayed. The alarm code is displayed if an alarm occurs.
- **Setting mode**
Function codes and function code data are displayed.

Dial

The dial is used to select setting items and detection values displayed on the LED monitor and to change function code data.

MODE/RESET key

This key is used to switch between operation mode, monitor mode, and setting mode.

- **Monitor mode**
Press this key to switch to setting mode.
- **Setting mode**
Press this key to switch to monitor mode.

SET key

In setting mode, press this key to display function code data or enter data.

Unit display LEDs (seven)

LEDs display the unit for data displayed on the LED monitor.

- V..... Voltage value display
- A..... Current value display
- kW..... Power value display
- Ω..... Resistance value display
- %..... Percentage display
- Hz..... Frequency display
- Sec..... Setting time display

Status display LEDs (five)

LEDs display the status.

- **RUN-LED (operation display)**
This LED is lit when the APR is operation status.
- **MON-LED (detection display)**
This LED is lit in monitor mode.
- **TB-LED (terminal block display)**
This LED is lit when APR operation is performed according to a command from the terminal block.
- **APD-LED (setting and display module display)**
This LED is lit when APR operation is performed according to the setting of the terminal block.
- **NET-LED (network communications display)**
This LED is lit when APR operation is performed using a command from the host via network communications.

STOP key

This key is used to stop APR operation.

RUN key

This key is used to start APR operation.

■ Display and key operation

Display section and operation section	Operation mode	Setting mode		Monitor mode		
		Operation stopped	Operating	Operation stopped	Operating	
 	Function	Displays operation data outputs for fixed display of multi-indicator.		Displays in 8 segments for operation data, internal I/O, and communications monitors.		
	Display	ON/flashing				
	Function	Displays function codes and function code data. Displays alarm code at alarm.		Displays output voltage, output current, output power, load resistance value, and output %. Displays alarm code at alarm.		
	Display	ON

Single-phase AC power regulators, APR- α series

Description

The APR- α series is a compact, light-weight single-phase AC power regulator.

They have a wide variety of applications in such as resistive load, inductive load and transformer primary circuits.

Features

- Compact and light-weight product required only a small panel mounting space.
- Variety of models with output current ratings from 10 to 200A are available. Select optimum models for your applications.
- Fan error protection features are provided for 150 and 200A models.
- Overcurrent protection and low input voltage protection features are provided for the APR- α C series.

APR- α series

- The APR- α C series has LED indicators for overcurrent and fan error alarms and for load current and control power indications.

Types and ratings

Series	Input voltage	Output current	Type
APR- α A series	100V/200V common	10A	RPAE2010
		20A	RPAE2020
APR- α B series	100V/200V common	30A	RPAE2030
		60A	RPAE2060
		20A	RPBE2020-□
		40A	RPBE2040-□
APR- α C series	100V/200V common	60A	RPBE2060-□
		100A	RPBE2100-□
		150A	RPBE2150-□
		200A	RPBE2200-□
APR- α C series	200V	150A	RPCE2020-□
		40A	RPCE2040-□
		60A	RPCE2060-□
		100A	RPCE2100-□
APR- α C series	200V	150A	RPCE2150-□
		200A	RPCE2200-□

Note: Replace the □ mark by the parameter setting code shown in the Table.

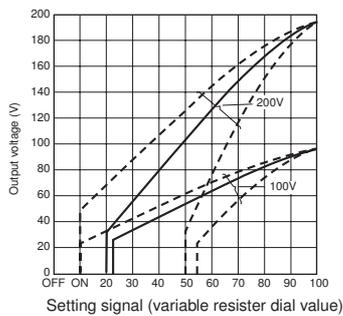

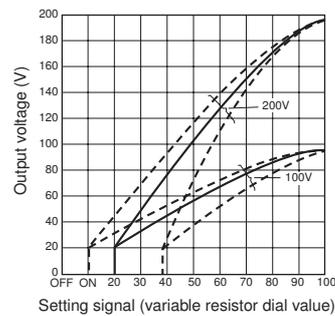

Parameter setting type code For APR- α B and α C series

Code	Parameter setting type
N	Current signal: 4 to 20mA DC Voltage signal: 1 to 5V DC
A	Variable resistor
B	Two-point control
C	Code N + gradient setting
E	Code A or C switchable
F	Code A or N switchable
Z	Non-standard current and voltage signals (custom spec.)

Output voltage characteristics for resistive load (Sample data)

α A series

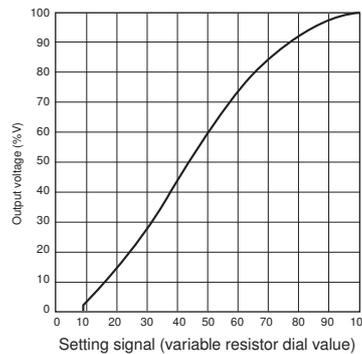

- RPAE2010, RPAE2020, RPAE2030
- RPBE2060

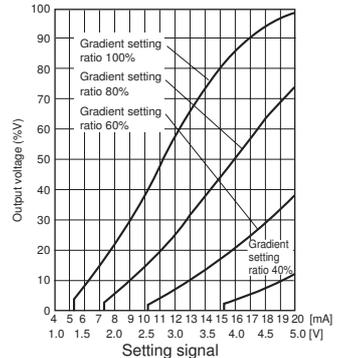

Note: • Output characteristics are variable at input voltage and input frequency.
• Solid line shows sample data.
• Dotted line shows variable area.

α B series

- Variable resistor setting

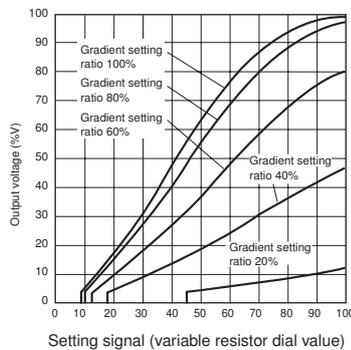

- Current signal setting
- Voltage signal setting

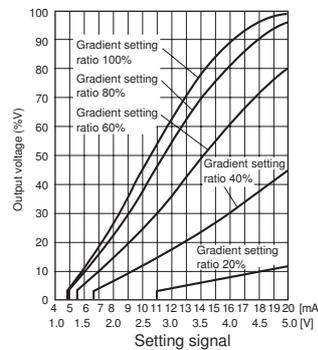

α C series

- Variable resistor setting

- Current signal setting
- Voltage signal setting

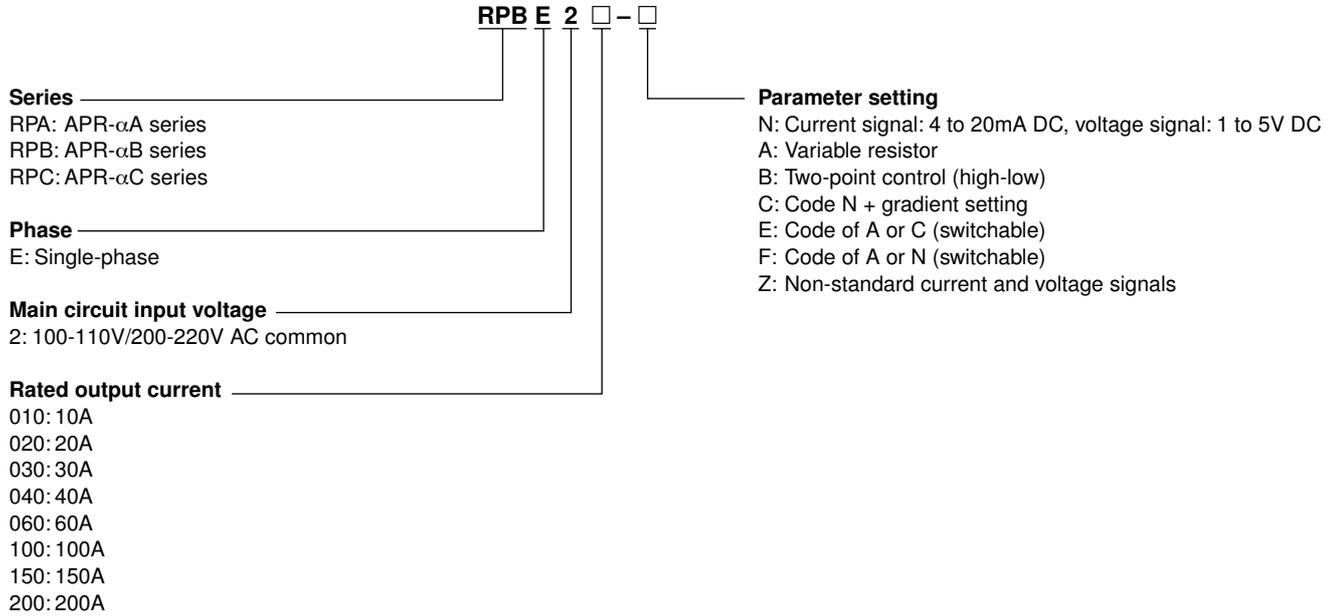

■ Specifications

Series	α A series	α B series	α C series
Type	RPAE2 □	RPBE2 □-□	RPCE2 □-□
Applicable load	Resistive load	Resistive load	Resistive load, inductive load, transformer primary circuit, rectifier primary circuit
Rated output current	10A, 20A, 30A 60A	20A, 40A, 60A, 100A, 150A, 200A

**Single and 3-phase AC power regulators
 PWM-APR series**

■ **Description**

The PWM-APR series use IGBTs as switching elements and adopt FUJI's unique pulse-width modulation (PWM) system for power conversion, thus obtaining sinusoidal output voltages.

■ **Features**

● **PWM power conversion system**

FUJI's unique PWM system suppresses higher harmonics on both input and output circuits.

Sinusoidal output voltage is variable from 0 to 97% at single-phase and 0 to 95% at three-phase of the input voltage.

IGBTs used as switching elements realize high efficiency.

● **Protection against output short-circuits**

The protection feature detects output short-circuits and limits output current instantly.

● **Applicable to many load types**

Applicable to resistive, inductive, and capacitive loads. Usable as low cost capacitor banks in place of power capacitors for power factor correction.

Conventional capacitor banks can only control lead currents stepwise. But, the PWM-APRs can vary lead currents continuously from zero to the maximum value.

■ **Principle of operation**

The PWM-APRs use the PWM system with the new main circuit configuration and high-frequency switching.

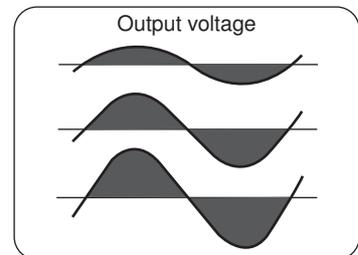

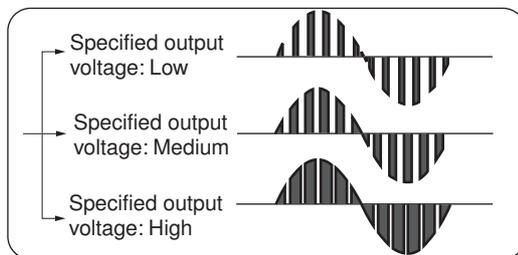

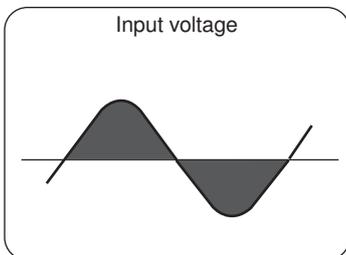

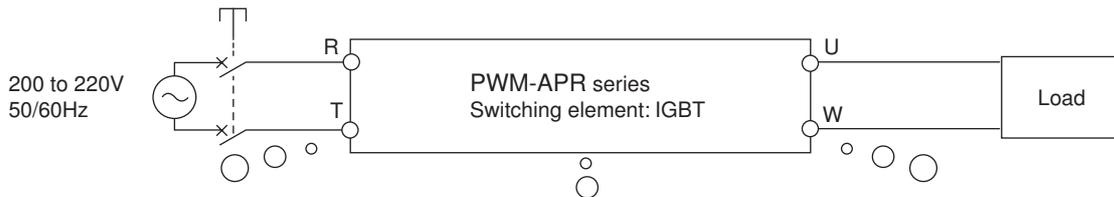

The PWM-APRs control output voltages to the specified level.

The output voltage waveform is made sinusoidal in order to suppress higher harmonics.

● **No external higher-harmonics prevention measure required**

The control system with a new main-circuit configuration and high-frequency switching outputs sinusoidal voltages to suppress higher harmonic currents.

■ Types and specifications

Type	RPWE2080-1C□-N	RPWE2160-1C□-N	RPWD2040-1C□-N	RPWD2080-1C□-N	RPWD2160-1C□-N
Input	Voltage and frequency		Single-phase, 200 to 220V 50/60Hz		
	Allowable voltage and frequency fluctuation		Voltage: ±10% of input voltage Frequency: ±1Hz		
	Power required 200/220V		16/17.6kVA	32/35.2kVA	13.9/15.2kVA
Output current		80A	160A	40A	80A
Cooling		Fan-cooled			
Applicable load		Resistive load, inductive load, transformer primary circuit (Contact FUJI for RPWD series), rectifier primary circuit and capacitive load			
Waveform control		PWM			
Output voltage adjustment range		0 to 97% of input voltage		0 to 95% of input voltage	
Output voltage setting		Variable resistor: 1kΩ, 2.5W Current signal: 4 to 20mA DC (Zin=250Ω) Voltage signal: 1 to 5V DC (Zin=1kΩ)			
Time to soft-startup, soft-increase/decrease		1 second			
Gradient setting		0 to 100% of setting signal			
Feedback control		AC AVR control + AC CLR control *			
Protection	Short-circuit	Detects short-circuits and limits output current instantly.			
	Overcurrent	AC CLR detects and limits overcurrent to the range below output rating.			
	Switching element overheat	Abnormal heat-sink temperature rise is detected in time to allow shutdown of APR operation. Operation resumes when temperature becomes normal.			
	Input voltage drop	Input voltage drop of 15% or more of rated voltage is detected in time to allow shutdown of APR operation. Operation resumes when the normal input voltage is recovered.			
	IGBT abnormal	Abnormal IGBT status is detected in time to allow shutdown of APR operation.			
Environment		Altitude: Up to 1000m. Free from corrosive gases, dust, vibration			
Ambient temperature		0 to +55°C (Output current should be derated when used above 40°C)			
Humidity		30 to 90% RH (no condensation)			
Withstand voltage (main circuit)		2000V AC, 1 minute			
Insulation resistance (main circuit)		20MΩ or more (500V DC megger)			

Notes: * AVR: Constant voltage control CLR: Current limit control
• Replace the □ mark by the parameter setting type shown in the Table below.

● Parameter setting type code (□)

Code	Parameter setting type
N	Current signal: 4 to 20mA DC, voltage signal: 1 to 5V DC
A	Variable resistor
B	Two-point control
C	Code N + gradient setting
E	Code of A or C (switchable)
F	Code of A or N (switchable)
Z	Non-standard current and voltage signals (custom spec.)

3-phase AC power regulators, APR-L series

■ Description

The APR-L series is a compact, light-weight 3-phase AC power regulator.

It has various parameter setting types, and it is suitable for automatic control of heater and incandescent lighting.

■ Features

- Very compact and light-weight.
- Highly reliable and long lasting (Uses solid-state components.)
Suitable for use in quiet places (Generates little audible noise.)
- 10 types of operation parameters enable flexible automatic control.

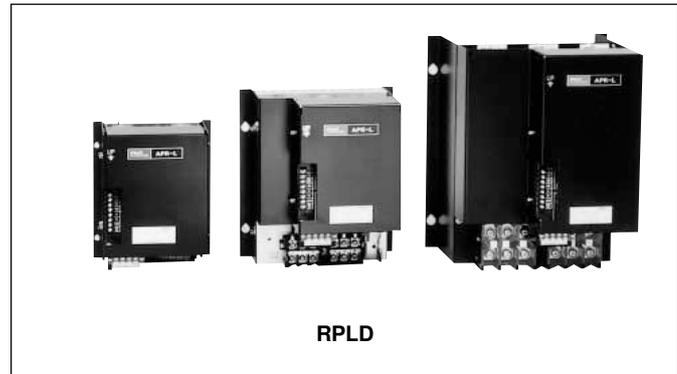

■ Types and ratings

Input voltage	Output current	Type
3-phase 200V AC	20A	RPLD2020-□
	40A	RPLD2040-□
	60A	RPLD2060-□
	100A	RPLD2100-□
3-phase 400V AC	20A	RPLD0020-□
	40A	RPLD0040-□
	60A	RPLD0060-□
	100A	RPLD0100-□

Note: Replace the □ mark by the parameter setting code shown in the Table at the right.

■ Specifications

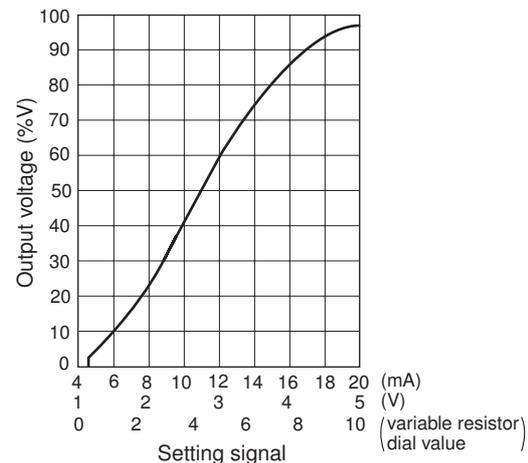

Input	Voltage and frequency	200 to 220V, 380V, 400 to 440V 50/60Hz (selectable)
	Allowable voltage and frequency fluctuation	Voltage: ±10% of input voltage Frequency: ±1Hz
Output voltage adjustable range		0 to 98% of input voltage
Gradient setting range		0 to 100% of setting signal
H-L control range		0 to 100%
Ambient temperature		-10 to +55°C (Output current should be derated when used above 40°C)
Applicable load		Resistive load
Output voltage setting		Variable resistor: 1kΩ Current signal: 4 to 20mA (250Ω) Voltage signal: 1 to 5V
Cooling		Self-cooled
Withstand voltage (between input and ground terminals)		200/220V: 2000V, 1 minute 380V, 400/440V: 2500V, 1 minute
Insulation resistance		5MΩ or more (500V DC megger)
Short-circuit protection		Super rapid fuse (external mounting)
Time to soft-startup and soft-increase/decrease		0.5 seconds

● Parameter setting type code (□)

Code	Parameter setting type
N	Current signal: 4 to 20mA DC Voltage signal: 1 to 5V DC
A	Variable resistor
B	Two-point control
C	Code N + gradient setting
E	Code A or C (switchable)
F	Code A or N (switchable)
Z	Non-standard current and voltage signals (custom spec.)

■ Voltage output characteristics for resistive load (typical)

■ Ordering information

Specify the following:

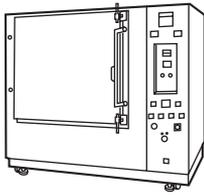

1. Type number
2. Special specification

■ Applications

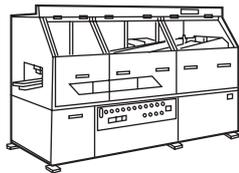

The FUJI APRs use semiconductor devices as main-circuit switching elements to realize long life and high reliability. As such, they are suitable for applications in which frequent load switching is required. Typical applications is high-precision control of heater temperature.

The FUJI APRs have no mechanical contacts. This means that the FUJI APRs do not generate noise when switching loads and they are suitable for use in quiet places or at night.

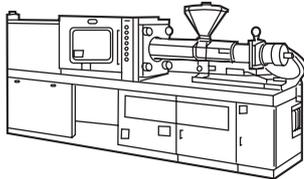

● Applications for heater control

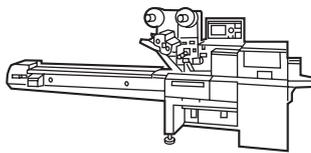

Constant temperature chamber

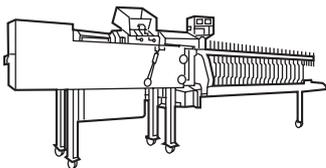

Soldering bath

Plastic injection-mold machine

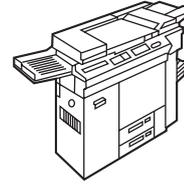

Pacing machine

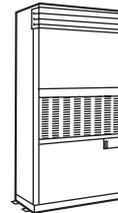

Filling machine

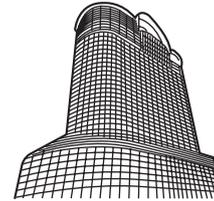

● Applications in quiet places

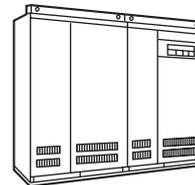

Copying machine

Air-conditioning equipment

Switchboard in a hotel

Power supply system for computers

Power supply system for hospital

Power Filters

RNFT, RNFM series input circuit Power Filters

■ **Features**

- Design complies with international safety standards (UL1283, CSA C22.2 No.8, EN 60939-2).
- Wide-ranging product lineup supports APR.
- Single-phase/3-phase, 250/480V AC, 25 to 600A
- High-performance damping characteristics with damping circuit construction ideal for APR noise.
- Small leakage current minimizes ELCB (earth leakage circuit breaker) malfunctions.

RNFHA series input circuit Power Filters

■ Features

- Excellent noise-damping performance conforming to EMC Directive requirements (provided that certain installation conditions are satisfied).
- Reliable damping of noise generated from inverters. (Better noise damping-performance will be achieved by using the Power Filter in combination with the RNFTS or RNFMS-series Power Filter for the load line.)
- Compact size and light weight achieved with original FUJI technology.

For further information related to FUJI inverter and servo system, contact FUJI.

Low-voltage control power transformers

■ Features

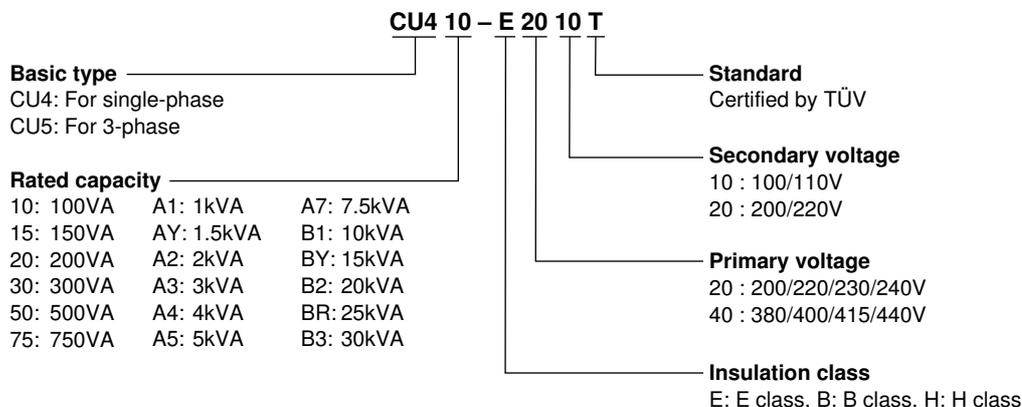

- Conformance to EN standards (EN61558-2-4:1997, EN61558-1:1997+A1) certified by TÜV
- Wide line-up includes 12 single-phase types, from 100VA to 5kVA, and 7 3-phase types, from 5kVA to 30kVA

■ Specifications

Type	Single-phase transformer CU4	3-phase transformer CU5
Capacity	100VA, 150VA, 200VA, 300VA, 500VA, 750VA 1kVA, 1.5kVA, 2kVA, 3kVA, 4kVA, 5kVA	5kVA, 7.5kVA, 10kVA, 15kVA, 20kVA, 25kVA, 30kVA
Frequency	50/60Hz	50/60Hz
Primary voltage	200/220/230/240V	380/400/415/440V
Secondary voltage	100/110V	200/220V
Insulation class	100 to 200VA E Class 300 to 3kVA B Class 4kVA, 5kVA H Class	H Class
Degree of protection	IP20	IP20
Shield	Electrostatic shield	Electrostatic shield
Connection and terminal layout		$\Delta - \Delta$ Yd1

UL506 and UL1446 approved low-voltage control power transformers

■ **Features**

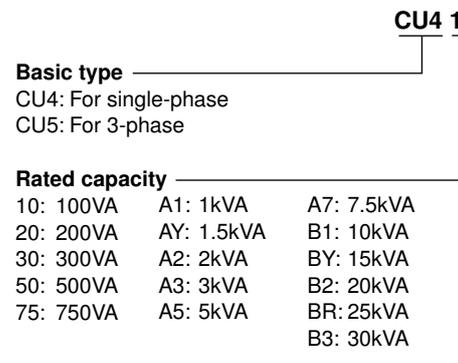

- Approval for UL506 (Specialty Transformer) and UL1446 (System of Insulating Materials — General)
 UL506: File No. E243896
 UL1446: File No. E243895
- All products have UL, c-UL, and CE marking.
- A wide product range is available.

■ **Specifications**

Catalog Disclaimer

The information contained in this catalog does not constitute an express or implied warranty of quality, any warranty of merchantability or fitness for a particular purpose is hereby disclaimed.

Since the user's product information, specific use application, and conditions of use are all outside of Fuji Electric FA Components & Systems' control, **it shall be the responsibility of the user to determine the suitability of any of the products mentioned for the user's application.**

One Year Limited Warranty

The products identified in this catalog shall be sold pursuant to the terms and conditions identified in the "Conditions of Sale" issued by Fuji Electric FA with each order confirmation.

Except to the extent otherwise provided for in the Conditions of Sale issued by Fuji Electric FA, Fuji Electric FA warrants that the Fuji Electric FA products identified in this catalog shall be free from significant defects in materials and workmanship provided the product has not been: 1) repaired or altered by others than Fuji Electric FA; 2) subjected to negligence, accident, misuse, or damage by circumstances beyond Fuji Electric FA's control; 3) improperly operated, maintained or stored; or 4) used in other than normal use or service. This warranty shall apply only to defects appearing within one (1) year from the date of shipment by Fuji Electric FA, and in such case, only if such defects are reported to Fuji Electric FA within thirty (30) days of discovery by purchaser. Such notice should be submitted in writing to Fuji Electric FA at 5-7, Nihonbashi Odemma-cho, Chuo-ku, Tokyo, Japan. The sole and exclusive remedy with respect to the above warranty whether such claim is based on warranty, contract, negligence, strict liability or any other theory, is limited to the repair or replacement of such product or, at Fuji Electric FA's option reimbursement by Fuji Electric FA of the purchase price paid to Fuji Electric FA for the particular product. **Fuji Electric FA does not make any other representations or warranties, whether oral or in writing, expressed or implied, including but not limited to any warranty regarding merchantability or fitness for a particular purpose.** Except as provided in the Conditions of Sale, no agent or representative of Fuji Electric FA is authorized to modify the terms of this warranty in writing or orally.

In no event shall Fuji Electric FA be liable for special, indirect or consequential damages, including but not limited to, loss of use of the product, other equipment, plant and power system which is installed with the product, loss of profits or revenues, cost of capital, or claims against the purchaser or user of the product by its customers resulting from the use of information, recommendations and descriptions contained herein. The purchaser agrees to pass on to its customers and users, in writing at the time inquiries and orders are received by buyer, Fuji Electric FA's warranty as set forth above.

Caution "Safety precautions"

- Operate (keep) in the environment specified in the operating instructions and manual. High temperature, high humidity, condensation, dust, corrosive gases, oil, organic solvents, excessive vibration or shock might cause electric shock, fire, erratic operation or failure.
- Follow the regulations of industrial wastes when the product is to be discarded.
- The products covered in this catalog have not been designed or manufactured for use in equipment or systems which, in the event of failure, can lead to loss of human life.
- If you intend to use the products covered in this catalog for special applications, such as for nuclear energy control, aerospace, medical, or transportation, please consult our Fuji Electric FA agent.
- Be sure to provide protective measures when using the product covered in these catalogs in equipment which, in the event of failure, may lead to loss of human life or other grave results.
- Follow the directions of the operating instructions when mounting the product.
